No Panic, No Injuries

Narrow Escape When Bus Breaks Through Ice

Quick thinking and instant action on the part of bus driver Reinhold Lundgren, coupled with a lack of panic among the 19 young people trapped in a school bus that went through the ice on a pond near the Doug Smith farm, Saturday evening, averted a tragedy.

Reinhold Lundgren, well-known district farmer, was in charge of the bus-load of young people from the Vulcan Church of Christ, who had enjoyed a skating party on the large slough at the Smith farm. The youngsters, all teen-agers, had piled into the vehicle to travel a short half-mile to the Smith home, where refreshments were to be served.

Another bus, driven by Doug Smith and also loaded with young skaters had successfully crossed the ice, on which a number of cars and trucks had been travelling and which seemed of more than adequate strength to cross, when suddenly the rear dual wheels of the Lundgren bus broke through the ice.

There was no panic, and all the young passengers but three were safely out the front door under Mr. Lundgren's direction before the front end of the vehicle broke through the ice and the bus started to settle into the water, which was about seven feet deep under about ten inches of ice. The last three passengers and Mr. Lundgren were in waist-deep water inside the bus before climbing to safety but were in no actual danger. Tony Pearce, minister of the Church of Christ and chaplain at the skating party, was also a passenger in the bus and assisted in helping the passengers to safety.

Most of the young passengers suffered no greater harm than wet feet and were unanimous in their praise of Mr. Lundgren for his cool-headed handling of the situation, which could have been much more serious had the water been deeper.

Among the youngsters who experienced the unpleasant incident were Carolyn and Donna Haga, Marilyn Metcalf, Rae Uily, Loran McMaisters, Gloria Bowie, Elaine Orchard, Marilyn Green, Merla Robertson, Donna McKay, Barbara Budd, Connie Gardner, Jim Spaeth, Lloyd Jones, Gerry, David and Lawrence Lundgren.

Elaine Orchard, who had suffered a wrist injury during the skating, was hospitalized overnight for X-rays the following morning.

The bus was recovered from the water on Sunday and received only slight damage.

Sorghum Alum Grass Should Be Tested

This grass grown last summer may be dangerous to feed livestock, says O. G. Bratvold, supervisor of Crop Improvement Service. Some cattle losses have already been reported.

The trouble is caused by a high concentration of Nitrate found in many samples. He refers to Dr. A. Case of the University of Missouri. "Nitrate at a 0.75% level will decrease milk production and at a 1.5% level death is likely to occur."

An average of eight samples tested at the University of Alberta found a concentration of 2.1% Nitrate and in one instance the concentration was 3.86%. The prussic acid content of Sorghum Alum is also a danger. However in most samples tested so far prussic acid has not been found at a dangerous level. Farmers may have their Sorghum grass tested for Nitrate and prussic acid content by submitting a small sample with a \$1.00 fee to the Soils and Feed Testing Laboratory, University of Alberta. Kits for sending these samples may be obtained at our office in the County Building.

Calf Vaccination:

Brucellosis vaccination of calves is proceeding well, we are now in the sixth year, since the County of Vulcan became a restricted area, with a steady increase in the number of calves vaccinated each year. The main difficulties in getting this job done are weather, and yet the work must be pursued diligently for about three months each fall and winter in order to get the work done at the proper

Now In Operation

New Abattoir To Serve Vulcan County Area

A quarter of a mile along the road north from the Red & White Store in Vulcan, lies a new service for the town and surrounding County. It is the County Abattoir, owned by Roger Middleton of the Red & White Meat Market.

Built last summer, the 24 x 28 foot cinder brick abattoir has been in operation for several weeks and is designed to operate for the needs of the Meat Market, but primarily it will be available to handle the increasing demand for facilities from those with cattle or hogs to be butchered for home consumption.

This is the only abattoir in the county, the nearest similar plants being at High River and Nanton, and with the rapidly expanding cattle population and with more and more farm and town folk having cold storage accommodation, the new abattoir is equipped to meet the increasing demand for this type of service.

The plant is set up with outside corrals leading by a chute, into the killing floor, the largest room of the three divided building. Here the animals go through the process from the killing, on to when they are hung in their finished condition, from an overhead roller conveyor system which runs from room to room. The sides of beef

or pork are inspected, weighed and moved from the killing floor into the drip cooler, a narrow, long room where they are "chilled down" for up to 12 hours, depending on the type of animal. Both the drip cooler and the aging cooler are kept at recommended temperatures. The final phase takes several days, or less in the case of pork, spent in the adjoining aging cooler from which they are ready for the customer.

Up to 50 animals is the capacity of the plant and inspection is done by Dr. Bernard Tonken. The construction and other details were inspected by Les Mallett of the Foothills Health Unit and regular checks are made in observance of government regulations.

Roger Middleton entered the meat business in Vulcan in 1942 and at that time worked for Merv McIntyre of Mac's Meat Market. They were located with Fleming's Groceries in the present Town and County Dry Cleaners premises.

In 1948 he moved to Bob Simington's Locker Plant and five years later shifted again, this time to his present location with the Fulton brothers in the Red & White Store.

With Roger are two assistants, Jim Clark and Calvin Rutberg.

Future improvements include permanent cold air regulation in the plant, extensive landscaping and organization of the property with the possibility of additional storage space.

The enterprise is an investment by the owner in the growing future of the district and is expected to fill the needs of this agricultural area.

ONE OF VULCAN'S well known businessmen, Roger Middleton is pictured above in the main room of his County Abattoir plant. This

new service of the Red & White Meat Market, will greatly assist those with beef or hogs to be butchered for home use.

Former Resident Dies At Edmonton

MRS. LUELLA WALKER

Mrs. Luella Walker, a resident of the Vulcan district for 31 years, passed away at Edmonton, Nov. 2, at the age of 75, following a lengthy illness.

Mrs. Walker was born in Bolivar, Missouri and came to Nanton in 1906, moving to Vulcan in 1910 and lived there until 1941 when she moved to Edmonton. She was a charter member of the Church of Christ, Vulcan.

Predeceased by her husband in 1941, she is survived by her daughter, Mrs. Orvil (Beulah) Doney of Edmonton; two sons, Buford, Vulcan and Bill of Coronado, Calif., and five grandchildren.

Jackpot Bonspiel Sunday, Nov. 29

The Vulcan Curling Club's first Jackpot Bonspiel of the 1959-60 season to be held Sunday, Nov. 29, is attracting many of Southern Alberta's top name curlers, probably as a tune up for the Lethbridge Rainbow Bonspiel held later the same week.

Heading the list is Hugh Brown of Claresholm with Barry Coleman on his rink, also four top rinks from Lethbridge as well as four-somes from High River, Blackie and Champion, and a few local rinks. For spectators this should be curling at its best.

Regular Meeting Ladies Auxiliary

Twenty members of the Ladies' Auxiliary to the Canadian Legion were present at the regular meeting, held Wednesday, Nov. 18, in the Legion Hall. The president, Mrs. Bell, was in the chair and conducted the meeting, assisted by the secretary, Mrs. E. Jones.

Mrs. Jean Shust, whose application for membership was suitably accepted at the previous meeting, was present and duly initiated. One application for membership was presented and favorably voted on.

Committee reports were given and correspondence was largely routine. A picture was ordered from a photo sufferer in Calgary, who is crippled and employs selling of her paintings to provide herself with a few extras.

It was decided to invite Mrs. Biggs, district commander, to be present at the December meeting, at which time election of officers for the coming year will be held. Mrs. Briggs will be asked to conduct the installation of the new slate.

The sum of \$25 was voted to the hospital fund, which is used to provide treats for veterans in hospital.

Following the annual meeting in December a social period will be held, when a Christmas Pie will be opened and small gifts exchanged.

Senior Citizens Night Nov. 30

The annual Senior Citizens' Night sponsored by the Vulcan Lionettes will be held on Monday, Nov. 30 at 6:00 p.m. in the IOOF Hall in Vulcan.

Anyone wishing transportation to the hall that evening, can arrange such by telephoning Mrs. Glen Dahl at Vulcan 90, or Mrs. Charles Northcott at Vulcan 265.

Generally mild weather has prevailed this past week. Rain on Tuesday evening was followed by a short-lived snow and windstorm that caused several breaks in power lines and the town was without electricity for about two hours.

Auction Prices

No beef steers or heifers were offered at the High River Auction Mart last Saturday which saw cows bringing stronger prices than in recent weeks.

The hog market, too, was up, with 327 head going through the ring at reasonably good prices.

Milder weather also saw an improvement in last week's Tuesday calf sale with 600 head on consignment.

Fearlessness is the mother of confidence.

THE 1959 WORLD WHEAT KING, 18-year-old Douglas J. MacKintosh of Granum was honored along with other 1959 world grain and seed champions at the Royal Winter Fair on Nov. 17. Highlighting the day's activity at the agricultural exhibition was the presentation of awards to the world champions. The Granum Grade 12 student was named Wheat King

when his entry of Chinook wheat topped others from Canada and the United Kingdom. The winning entry initially won in a class of 22 4-H club exhibits. In this class Alberta 4-H members won the first 12 placements. The wheat champion is seen with the Canadian National Railways challenge trophy, emblematic of world supremacy.

Things that influence car insurance costs

Inevitably, automobile insurance rates must go up or down depending on whether the claims being paid are going up or down. In the long run, the money paid out to settle claims and to run the business cannot continually exceed the amount of money collected in premiums.

In recent years, practically all the things which determine how much money has to be paid out have been increasing. Here are some of them:

1 The Cost of Cars—The \$2,000 car of yesterday has become the \$3,000-\$4,000 car of today. And even a "low price" car may smash another vehicle costing much more. The cost of insurance must always be related to the cost of repair or replacement.

2 The Styling of Cars—The modern car has many improvements over the car of yesterday—all costing money. Wrap-around windshields improve visibility, but cost five times as much to replace when broken. Power steering improves handling, but is expensive to repair. One-piece body units eliminate rattles but skyrocket replacement costs. In cost of parts alone, the repair bill that must come out of insurance premiums is more than double that of yesterday.

3 The Cost of Repairs—Quite aside from parts, the average garage repair bill is far higher than it used to be, because the garage's costs have gone up also and the garage repairman gets a higher rate of pay than he used to—as do most Canadians today.

4 Increased Medical Costs—Hospitals, too, must charge higher rates today than they used to—and once again this cost must come out of the car insurance premium. Other medical costs are similarly increased.

5 The Costs of "Lost Time"—Canadians generally, are drawing considerably higher incomes than they used to. That means that the costs of keeping an accident victim off work until his injuries are healed are substantially increased. This is another cost which has to come out of the premium.

6 The Number of Accidents—Naturally, the cost of car insurance is greatly affected by the number of accidents in relation to the number of cars insured. Thanks to the efforts of many people, this ratio of accidents has started to go down—only moderately down as yet, and not nearly enough to offset all the costs which have been going up. Nevertheless, this trend toward a lower accident ratio—a trend we all can assist by careful driving—probably holds the best hope of all for keeping auto insurance costs down in the future.

HOW TO PLAN

YOUR CHRISTMAS MAIL

- 1 Buy your stamps now and avoid the Christmas rush. 2 and 5 cent stamps are available in handy dollar packages for your convenience.
- 2 Check your mailing list for correct postal addresses. When mailing to Vancouver, Winnipeg, Toronto, Ottawa, Montreal and Quebec, be sure to include the Postal Zone Number.
- 3 Tie your out-of-town mail and local mail in separate bundles. Attach the labels that the Post Office supplies. This speeds delivery. Be sure to put your return address on the envelopes.
- 4 Parcels should be wrapped well and tied with strong cord. Print the address. And put your return address outside and inside the parcel. Have parcels weighed at your neighbourhood Post Office.
- 5 Mail early. Nothing is so disappointing as Christmas mail that arrives too late. A Post Office leaflet will be delivered to your home giving suggested mailing dates.

VULCAN Phone 37Engine in the rear?
Why, of course!

American and European automobile manufacturers have now adopted the sound principle of the rear-mounted engine. Something once considered unorthodox is now recognized as plain engineering common sense.

You see, Volkswagen's rear engine gives direct drive to the wheels, saving weight and power. It is the most efficient and economical design. And the rear engine gives your rear wheels better traction. In mud, sand, ice, snow, where other cars skid, you go.

What is more, the Volkswagen engine is air-cooled, a decided advantage when you think about it. No water to

boil over in summer, or to freeze in winter. No anti-freeze needed. No radiator problems.

The engine is ingeniously cast of aluminum and magnesium alloys and is very light and powerful; undoubtedly the toughest 198 lbs. going.

It is beautifully machined for minimum friction; you will probably never need oil between changes. And so efficient that top and cruising speeds are the same. Your Volkswagen will run at 70 m.p.h. all day without strain. You get an honest 39 miles to the gallon (regular gas—regular driving).

This
minister
of labour
is a"do-it-yourself
man!"

No temperamental storm window can defeat this family minister of labour. Leaving the difficult jobs to the professionals, he looks after smaller repair jobs in his home, himself. He's a determined fellow who aims at keeping his family expenditures well within his income at all times.

The Minister of Labour at Ottawa requires millions of dollars to meet departmental expenditures, each year . . . and his department is only one of many.

Money for all departments of government comes through the Minister of Finance who gets it largely in taxes from Canadians such as you. When more money is spent than is collected in taxes, government must borrow from you . . . or else create new money. The creation of new money is one factor that leads to inflation . . . which means your dollar buys less and less.

The government has been spending more than you have been paying in taxes. To narrow the gap between income and expenditures, new taxes have been imposed.

The next step should be to reduce expenditures, or at least hold the line. Undertaking new commitments — adding new welfare or other services — will only make it that much more difficult to pay our way. Tell your M.P. at Ottawa that since you are trying to save, you expect government to do the same.

You also help when you save more by means of life insurance, savings deposits, and the purchase of government bonds. Your savings help to create a SOUND dollar; and this, in turn, helps to create job security for you and more jobs for other Canadians.

Tariffs Penalize Farmers

During the past few years the Canadian Wheat Board has been steadily building a market for Canadian grain in Japan. The Japanese have consistently pointed out that their ability to buy is curtailed by the market they can find for their own goods. In spite of an imbalance of trade with this country, of almost two to one against her, Japan has risen to be Canada's second best customer for grain.

Recently, in the face of this developing market and our lagging reciprocal trade, the federal government prevailed upon the Japanese to "voluntarily" curtail their exports of textiles to this country in order to protect the Canadian market for our own textile manufacturers. This action has been taken for the benefit of an industry that is already heavily protected by tariffs. It can have nothing but a detrimental effect on the maintenance and hoped for expansion of the Japanese market for Canadian grain. Western farmers look upon the development with grave concern.

If our Canadian manufacturers have to be pampered and protected, why doesn't the government pay them a subsidy out of the public treasury instead of penalizing the farming industry that can and will stand on its own if given a chance? Authorities apparently prefer to aid industry by making the farmer pay a double-barrelled toll. First, he has his markets jeopardized abroad by having it made more difficult for customers to pay for his grain and secondly, he is forced to pay the Canadian manufacturer's inflated, tariff-protected prices when he could obtain cheaper, and often superior goods, from the would-be purchasers of his grain.

Hold Prices On Farm Machinery

Deere & Company announced it has decided to hold the line on prices of John Deere tractors and equipment despite cost increases in the past year.

"Although costs have gone up appreciably, the Company has decided, for the time being, to absorb these additional costs in an effort to hold the line against further inflation," President William A. Hewitt said.

Hewitt said, however, that "no assumption can be made at this time concerning the future level of our prices. If costs continue to rise, it will become necessary later on to make some price adjustments."

He explained that the Company customarily reviews its prices each fall and makes whatever adjustments are necessary due to changes in costs since the last general price change.

Costs of most goods and services the Company purchases have increased in the past year. Not only have labor costs increased, but also state and local taxes, materials, machinery, transportation and other items.

METHODS OF SUMMERFALLOWING

D. T. Anderson, Agricultural Engineer (Lethbridge Research Station) Southern Alberta has experienced severe soil drifting at frequent intervals throughout its agricultural history. The drifting that occurred during the winter and spring of 1957-58 and again in the spring of 1959 provided an opportunity to evaluate various summerfallowing practices from an erosion control standpoint. Drifting was sufficiently serious on some plots devoted to comparative tillage studies to require emergency control measures during both of the above periods.

Plots cultivated exclusively with a wide-blade cultivator required a total of 13 fallowing operations during the four-year period ending in 1959. Sufficient trash protection was present to prevent drifting, and emergency tillage was not required.

Plots on which the one-way disk was used for initial tillage and the wide-blade cultivator was used for all secondary operations required a total of 12 strokes (1956-59) including one to stop drifting. Trash protection on these plots has been only partially effective against wind action.

Plots on which the one-way disk was used for all operations during the fallow period (1956-59) required a total of 13 operations. Two of these were carried out to stop drifting in 1958 and again in 1959. Trash protection has been negligible on these plots and the soil surface was noted to be in an erodible condition at the conclusion of the fallow season.

The use of the subsurface cultivator for fallowing occasionally requires an extra operation for good weed control. However, this extra operation is frequently counterbalanced by the need to carry out emergency tillage on fields that do not carry adequate trash protection. Erosion prevention is an essential feature of good summerfallowing. This can be accomplished only through an emphasis on the use of the subsurface cultivator and by minimizing the use of disk-type implements.

CATGUT USES

Catgut — used by the surgeon if he has to stitch a wound — by the musical-instrument maker for strings — in the manufacture of tennis rackets and in various other ways — has nothing to do with cats. It comes from the intestines of sheep. Many other products useful in science and industry come from the same source.

FAVOR NEWSPAPERS FOR ADVERTISING

How valuable is a local newspaper advertising to local business? Here's what the American Bankers magazine, a publication which represents a traditionally hard-headed profession, has to say: "No business man or woman in any town should allow a newspaper to go to press without his or her name and business being mentioned somewhere in its columns."

"This does not mean that you should have a whole, half or even a quarter page advertisement in each issue of the paper, but your name and address should be mentioned if you do not use more than a two line space. A stranger picking up a newspaper should be able to tell what business is represented in a town... its best possible town advertiser."

"The man or woman who does not advertise does an injustice to himself or herself and definitely to the town."

In the current fiscal year the federal government will collect from the public and then turn over to the provinces — in the form of subsidies, grants and other payments — a total of \$1,212,000,000, a sum about equal to the amount that the provinces will collect on their own behalf.

WOLFE AND QUEBEC

A notable anniversary for Canadians occurred on Sept. 13 for it was on that day 200 years ago that Wolfe took Quebec. His early thirst for the life of a soldier, delicate though he was. His military career began at the age of 15. He had much experience in Europe before being sent by Pitt to command the British forces at Louisbourg and later at Quebec.

Sin has many tools, but a lie is the handle which fits them all.

I am the door: by Me if any man enter in, he shall be saved, and shall go in and out, and find pasture. —John 10:9

Jesus, the great I AM, is the entrance into the true church, and the way of access to God Himself. He gives to the man who comes to God by Him four choice privileges.

1. He shall be saved. — The fugitive manslayer passed the gate of the city of refuge and was safe. Noah entered the door of the ark and was secure.

2. He shall go in. — He shall be privileged to go in among the divine family, sharing the children's bread, and participating in all their honors and enjoyments.

3. He shall go out. — This blessing is much forgotten. We go into the world to labour and suffer, but what a mercy to go in the name and power of Jesus. We are called to bear witness to the truth.

4. He shall find pasture. — He who knows Jesus shall never want. Going in and out shall be alike helpful to him: in fellowship with God he shall grow, and in watering others he shall be watered. —A.C.F.

HERE'S Corvair BY CHEVROLET WITH ENGINE IN THE REAR

WHERE IT BELONGS
IN A COMPACT CAR

We knew Corvair's engine had to go in the rear if we wanted a compact car with big car ride, big car room, big car performance — and maximum efficiency. And that called for the most drastic revolution in auto design and manufacturing Canada has ever seen. What does a rear engine mean to you as driver or passenger?

MORE SPACE — The floor is virtually flat. The short "opposed six" engine takes up less space, leaves more for passengers.

FAR BETTER RIDE — Every wheel can sop up a bump without affecting any other. So the ride is far softer — and the wheels cling to the pavement better.

GREATER TRACTION — Try a Corvair on mud, or snow, you'll be astounded by the difference in road-grip and control.

BETTER BRAKING — Corvair is designed to put an almost equal brake load on every wheel; the rear end maintains solid, sure traction for smooth, straightline stops in virtually any situation.

LESS NOISE, LESS HEAT — Engine noise, heat, fumes are behind the passengers; carried away by the wind stream as you drive.

LESS MAINTENANCE — Corvair's air-cooled engine never needs antifreeze, never boils in the hottest weather. It warms up quicker in cold weather, so there's much less cold-start wear.

BETTER HANDLING — Corvair's "flat" engine and lower floor gets the centre of gravity way down; it rides rock-solid through the tightest turns. Steering is light as a feather, will never need power assistance.

LESS NEEDLESS WEIGHT — Corvair's power plant is mostly aluminum. And it's air-cooled — no need for a radiator, water pump, hoses or even

the weight of the water itself. And there's an added plus here; we designed a gas-fired car heater* that gives warmth almost instantly.

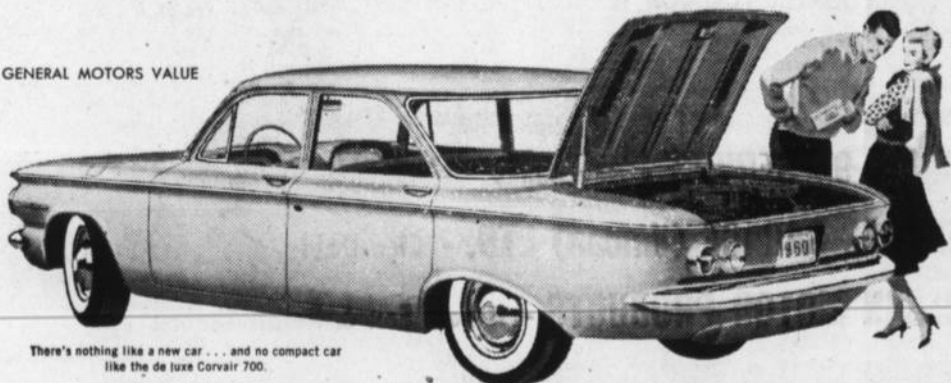

Engine, transmission, and rear axle are all bolted together into one solid power unit. We save literally hundreds of pounds, and that makes a whopping big difference in performance and in gasoline economy.

THE RIGHT ANSWER — It took a terrific amount of engineering and Chevrolet's tremendous resources to design, test and set up production on a precedent-shattering car like Corvair. But the first time you get behind the wheel — you'll agree it was worth every penny and every hour!

*Optional at extra cost.

A New Service . . .

BY RED & WHITE MEAT MARKET

For several years we have been serving the people of Vulcan and the surrounding County with meat and frozen foods from our department located in the Red & White Store. Increased demand for abattoir services has led to our recently constructed plant located directly north of the downtown area. We feel this provides the answer to the many town and district folk with freezers who require facilities to have their own cattle and hogs butchered and dressed ready for family use.

The economy of such home provision by the livestock producer is a major factor to be considered plus the knowledge that proper care, under inspection, is given every animal that goes through the plant.

THE DRIP COOLER— These hogs, butchered on the Killing Floor, will hang for a period of time under cool temperatures to be chilled down.

We are equipped to offer complete service to both local and distant customers. Prompt attention will be given your every need by contacting us at the Red & White Meat Market.

MANY SUFFER FROM AN 'ITIS'

An exact definition of three conditions which may confuse the average person — rthritis, neuritis and bursitis was given recently by the Health League of Canada.

"Itis" means inflammation. "rth" means joint; "neur" means nerve; a "bursa" is a sort of soft envelope, filled with mater like soft jelly, that is found in spots that are apt to rub, as at the elbow and knee.

Arthritis then, means inflammation of any joint; there are four main kinds and about 20 rare kinds.

Bursitis means an inflamed bursa, and may occur over the kneecap (housemaid's knee), elbow, or in the shoulder, notably. It is usually caused by injury, friction or unaccustomed use.

Neuritis is an inflammation of a nerve. It may result in pain, numbness or paralysis in the part supplied by that nerve.
